DETAILED ACTION

Specification

- 1. The abstract of the disclosure is objected to because the heading "Abstract" is misspelled, and "convertion" should be changed to "conversion" (Line 6). Correction is required. See MPEP § 608.01(b).
- 2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and **generally limited to a single paragraph** on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Drawings

3. The drawings are objected to because the names of the parts are not included in Fig 6.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

- 4. Claim 1 is objected to because of the following informalities: "unform density pixel" should be changed to "uniform pixel density". Appropriate correction is required.
- 5. Claims 5-6 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Application/Control Number: 09/331,008

Art Unit: 2615

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C.102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 7. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Hoagland (5309241).

(Claim 1) Hoagland discloses a zoom image input method that enables zooming without degrading the resolution by including a fixed focus input image optical system (106) having a function of compressing the circumferential part of the input image, the image input device providing preferably uniform pixel density, and image converting and correcting system(Col 3, Lines 41-58, 66-68; Col 4, Lines 1-6, 55-65; Col 5, Lines 56-68; Col 6, Lines 1-32).

(Claim 2) Hoagland inherently discloses the optical system (106) is included as an attachment optical system in that optical taper assemblies are not integrated parts of regular lens units. They must be attached to the lens units.

(Claim 3) Hoagland further discloses the compression of the circumferential part of the input image is limited to the vertical and horizontal direction (Col 4, Lines 55-65; Col 5, Lines 56-68; Col 6, Lines 1-32).

(Claim 4) Hoagland further discloses the image input device has a rectangular input image plane (see Fig 3) and the optical system compresses the circumferential part of the input image to all directions, and the neighboring part of the vertical and horizontal axes of the input image (Col 4, Lines 55-65; Col 5, Lines 56-68; Col 6, Lines 1-32).

Application/Control Number: 09/331,008

Art Unit: 2615

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Songer (5696560) discloses a motion picture distribution system improving horizontal and vertical detail. Trumbull et al (5124840) disclose a portable viewing apparatus for use in providing either a three-dimensional image or a wide-angle image. Fukuoka et al (5673086) disclose an image aspect ratio conversion processing apparatus. Drewery et al (5956091) disclose a method of showing 16:9 pictures on 4:3 displays. Teraoka et al (5537149) disclose a display device having a display screen of 4:3 aspect ratio for displaying fully a video image of 16:9 aspect ratio. Flory (4897722) discloses a wide screen enhanced definition television system compatible with an existing television standard. Suzuki (5668666) discloses a zoom lens with an anamorphic converter.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tia M Harris whose telephone number is 703-305-4807. The examiner can normally be reached on M-F 8:30 am - 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Christensen can be reached on 703-308-9644. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9314 for regular communications and 703-308-6606 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-4700.
